Abstract

We present *Genesis Field Dynamics (GFD)*, a symbolic-operational theory of cosmogenesis derived from textual analysis of Genesis, Exodus, and John. GFD posits that reality emerges from a sequence of symbolic operators $\{\hat{S}_i\}$ (Genesis) acting on a vacuum state $|\Omega\rangle$, transformed by a vortex interface of 72 operators $\{\hat{T}_j\}$ (Exodus), and resolved into observation via symbolic decoherence (John). This framework maps a symbolic flow from creation ($\hat{S}_i$) to transformation ($\hat{T}_j$) to observation (γ_k), interpreting reality as a recursive symbolic triangulation: Word → Passage → Recognition.

1 Genesis: Foundational Postulates

1.1 Symbolic Field Space

- The universe is a symbolic manifold $\mathcal{M}_5$ with coordinates $x^M = (x^\mu, z)$, where z is symbolic recursion depth.
- A symbolic-complex field $\Phi(x^M) \in \mathbb{C}^n$ encodes information.

1.2 Primordial Vacuum and Operators

- The system begins in an undifferentiated state $|\Omega\rangle$.
- Ten "creative utterances" from Genesis 1 define symbolic operators $\{\hat{S}_i\}_{i=1}^{10}$. These act recursively to generate the symbolic field:

$$\Phi(x^M) = \sum_{i=1}^{10} \alpha_i \cdot \chi_i(x^M) \tag{1}$$

where χ_i is a symbolic mode and α_i a weight.

2 Exodus Extension: Symbolic Vortex Transfer

2.1 Operator Layer

- Exodus 14:19–21 is interpreted as encoding a vortex interface, $\Omega_{\text{Shekhinah}}$, where symbolic states transform.
- 72 transformation operators $\{\hat{T}_j\}_{j=1}^{72}$, corresponding to the *Shem HaMephorash*, act on the field:

$$\hat{T}_j : \Phi_{\text{pre}} \to \Phi_{\text{post}} \tag{2}$$

2.2 Transfer Mapping

The Exodus interface acts as a holographic map $\mathcal{H}_{\text{Exo}}$ connecting the Genesis and John layers:

$$\Phi_{\text{present}} = \sum_{j=1}^{72} \hat{T}_j(\Phi_{\text{Genesis}}, \Phi_{\text{John}}) \tag{3}$$

3 John Extension: Observer-Space Decoherence

3.1 Symbolic Future

John 1:1–10 is modeled as a projection from symbolic potential (Φ_{John}) into observed reality via decoherence. The field is composed of three components:

$$\Phi_{\text{John}} = \Lambda_{\text{Logos}} + \Gamma_{\text{Witness}} + \Delta_{\text{Refusal}} \tag{4}$$

3.2 Symbolic Collapse Law

The symbolic field resolves upon observation, where non-recognition (rejection) by an observer induces a collapse of the symbolic modes χ_i into actualized states γ_k:

$$\chi_i \to \gamma_k, \text{ under } \hat{T}_j \text{ and observer rejection} \tag{5}$$

4 Transversal Symbolic Laws

The model is governed by four transversal laws connecting the three layers:

- **Law A (Genesis Imprint):** Each $\hat{S}_i$ maps into Exodus and John.
- **Law B (Wormhole Continuity):** $\hat{T}_j \sim \hat{S}_i$ by a symbolic mapping.
- **Law C (Collapse Law):** Non-recognition induces the collapse $\Phi \to \gamma_k$.
- **Law D (Triadic Conservation):** All transformations follow the Genesis–Exodus–John pathway.

5 Diagrammatic Summary

The model describes a directed symbolic flow from creation to transformation to observation:

$$\hat{S}_i \to \hat{T}_j \to \gamma_k \tag{6}$$

This forms a 3-layered network connecting the three scriptural stages.

[A diagram illustrating the 3-layered symbolic network would be placed here.]

A Vortex Transfer Dynamics

- **Pre-vortex:** The Genesis operators $\hat{S}_i$ define the initial symbolic potential.
- **Core:** The Exodus interface $\Omega_{\text{Shekhinah}}$ applies the 72 transformations $\hat{T}_j$.
- **Post-vortex:** The John field Φ_{John} decoheres into symbolic actuality.

Reality in GFD emerges via recursive symbolic triangulation:

Word $\to$ **Passage** $\to$ **Recognition.**
